

## Imagine if...

...changing a phone number **one** time in **one** place changed it **automatically** on **every PDF directory**, **every PDF roster**, and **on the website**

...you could **start an email to every committee chair** *in one-click*

...looking at any info showed you every **church** and **person** and **committee role** related to it **on the same page**

...your **central information resource** was **designed** around **multiple, unlimited, concurrent past/present/future roles per person** so that you're always **building a rich context** around all related information and **preserving a history** over time

...**PDF directories, committee rosters, and mailing labels** were generated automatically and always *one click away*

...**everyone in your presbytery** could get *\*current and reliable\** contact details for **who's serving on every committee...** or the **pulpit supply list...** or every **minister...** or every **educator...** and print out rosters and directories themselves – on the **Presbytery Website Directory**

...you were notified when a **validated ministry** or **stated supply** term is **up for renewal**

...you could see every **presbytery meeting** a **person** or **church** attended (*and # commissioners sent*)

...the **Committee on Representation/Nominations** could **preview how many vacancies** there will be on **COM** in 2017 after the current class rolls off

...your **Executive Presbyter** had every **pastor's name**, phone number, **church**, and email address right in his/her **phone contacts**

...there was **no need for special software, tech skills, or IT installations/upgrades/servers/backups**

**Imagine if everyone could get to the information... from anywhere... anytime**  
**Organize, Modernize, and Empower your Entire Presbytery in One Seamless Transition**
